Implementing Business-Critical Functionality for Microsoft SharePoint 2010

Service Offerings for Social Computing, Web Content Management, Enterprise Portals, and Enterprise Search

Help maximize your Microsoft SharePoint investment and realize its full business benefits.

The Microsoft® SharePoint® 2010 business collaboration solution helps organizations to connect and empower people throughout the enterprise and beyond, transforming how colleagues, partners, and customers can work together in new and innovative ways.

Revitalize your business processes by implementing Social Computing, Web Content Management, Enterprise Portals, and Enterprise Search to your SharePoint Solution. Microsoft Services will work with you to help with each functional Solution that is based on SharePoint is properly planned and deployed to meet your specific business needs.

Harness the Business Potential of Social Computing

The exploding use of blogs, wikis, and other public Social Computing platforms such as Facebook, Twitter, and LinkedIn has opened a new and innovative approach to communications. SharePoint 2010 takes this new approach to the enterprise by empowering the critical stakeholders to share and express themselves across a tapestry of relationships and networks to advance business priorities.

The Microsoft Services Social Computing Using Microsoft SharePoint Server 2010 Offering helps organizations realize their goals for achieving effective collaboration among teams, departments, and divisions. This service Offering provides a set of deliverables, methodologies, and practices to aid in the planning and deployment of SharePoint as a Social Computing solution. Microsoft Services consultants will offer you guidance for your specific business scenario, such as community sites, virtual workspaces, blogs, wikis, podcasting, or simple inter-company communications.

Make the most of your SharePoint investment by:

- Realizing your business collaboration goals through Social Computing.
- Reaching customers and partners with engaging online experiences through Web Content Management.
- Implementing online productivity tools and resources through Enterprise Portals.
- Bringing the power of Search to your organization with effective Enterprise Search.

Microsoft Services experts are backed by leading practices developed through successful engagements worldwide.

Microsoft Services offers significant guidance and services tailored to a range of needs for your SharePoint implementation, such as:

- Technical requirements
- Architecture and design
- Infrastructure analysis
- Upgrade or migration
- Governance
- Application Lifecycle Management
- Capacity planning
- Security
- Deployment

Streamline Your Web Content Management

As Web Content Management technologies have matured, companies that have deployed a jumble of disparate products are now turning to unified solutions such as SharePoint 2010. The benefits are significant: greater agility through easy-to-use authoring and publishing tools, enhanced business transparency, unified content management, less dependence on information technology (IT), and lower costs.

The Microsoft Services Web Content Management Using Microsoft SharePoint Server 2010 Offering delivers an integrated, single-platform solution that connects users to the information they want, while helping to reduce costs and IT staff workload. The Web Content Management Offering is founded on a thorough review of your existing infrastructure and business requirements, so you can reach your goals with a manageable platform. This will enable you to respond rapidly to Internet business opportunities, retain clients and partners with effective, engaging online resources, and stay current with the latest in Web technology.

Optimize the Value of Your Enterprise Portals

Building a collaborative workforce across organizational and geographical boundaries demands an effective, stable enterprise portal that is highly functional, while still able to manage a wide variety of work practices, information needs, and cultural differences.

The Microsoft Services Enterprise Portals Using Microsoft SharePoint Server 2010 Offering employs Microsoft best practices to help with effective implementation of your enterprise portal on SharePoint 2010 for either on-premise or in the cloud, a set of computing services available on the Internet. Our expert consultants focus on planning, architecture, and deployment, with specific emphasis on how to manage operational readiness for two key scenarios:

- Publishing broadly available intranet content.
- Accessing broad business functions through intranet-based productivity solutions.

Expand the Power of Enterprise Search

To address the ballooning volume of digital content that hampers business productivity, businesses are looking for a comprehensive search solution that provides high-quality, relevant results in an expedient manner. SharePoint 2010 provides an integrated, easy-to-manage platform for enterprise search that moves beyond the traditional “10 blue links” to a visual, interactive experience that allows users to be more productive with Search.

The Microsoft Services Enterprise Search Using Microsoft SharePoint Server 2010 Offering brings the power of high-end search to your organization by helping you evaluate and deploy SharePoint Search or FAST Search for SharePoint. We work with your team to evaluate the appropriate search solution based on your specific business needs and technical requirements to provide guidance on architecture and design, distributed indexes, federation, filtering, and security.

Advance your business collaboration with the powerful, flexible SharePoint 2010 platform. Whether deployed on-premise or in the cloud, SharePoint 2010 can help to reduce IT management costs while empowering your users' productivity through an effective implementation of built-in SharePoint functionality. Contact Microsoft Services today to plan and deploy SharePoint solutions tailored to your specific business needs.
